FF6716 5W-30 6716

Innovative energy-saving synthetic engine oil for modern gasoline and diesel engines of FORD and VOLVO vehicles, specially developed for harsh conditions and extended engine oil change intervals.

Product properties:

- Ester components provide excellent anti-wear and anti-friction properties due to the exceptional durability of the oil film, which, combined with excellent pumpability, significantly increases engine life in a variety of driving modes;
- Significantly saves fuel due to the reduced high-temperature viscosity (HTHS) and excellent anti-friction properties;
- Effectively protects the timing belt from wear, offers an increased total base number (TBN) and excellent compatibility with sealing materials, following additional requirements of FORD;
- A synthetic base guarantees low volatility and reduced oil consumption;
- Excellent washing and dispersing properties, together with the highest thermal-oxidative stability, effectively prevent all types of deposits and keep engine parts clean throughout the oil change interval;
- Effectively resists ageing;
- Suits bio diesel engines.

Designed for gasoline and diesel engines of FORD passenger vehicles (excluding North American), VOLVO and GM, where SAE 5W-30 oil is recommended, which complies with ACEA A5 / B5 standard.

The oil is not suitable for use in heavy trucks and similar vehicles!
